1. Introduction

1.1 Overview

EverMore GM-R900 series is a high sensitivity GPS receiver, This product is based on SiRF starIII chipset in 20 channel GPS receivers solution. The GPS module receiver will track up to 20 satellites at a time while providing fast time-to-first-fix and 1Hz navigation updates. Its far reaching capability meets the sensitivity & accuracy requirements of car navigation as well as other location-based applications, such as AVL system, PDA, Notebook operated navigation system.

The GM-R900 design utilizes the latest surface mount technology and high level circuit integration to achieve superior performance while minimizing dimension and power consumption. This hardware capability combined with software intelligence makes the board easy to be integrated and used in all kinds of navigation applications or products. The module communicates with application system via RS-232 level with NMEA-0183 protocol.

1.2 Features

The GM-R900 GPS engine board offers following features:

- SiRF starIII Chipset 20 Channels all in view tracking
- High Sensitivity -159dBm
- Reacquisition Time: 0.1 second
- Support Standard NMEA-0183 at 4800 bps baud rate
- On-board rechargeable battery sustained real-time clock and memory for fast satellite acquisition during power-up
- USB driver support for Win98/XP/2000/Vista , Mac , Linux O/S

1.3 Applications

- Land/Marine Navigation
- Telematics
- Fleet Management
- Asset Tracking
- Timing Reference

1.4 Start-up Modes

Definitions	DESCRIPTION
<p>Cold Start</p>	<p>The Cold Start takes the longest startup time among EMT GPS receivers. In this scenario, the receiver has no acknowledgment on the last position, time, and satellite constellation. The receiver is initiated to search blindly for satellite signals in the cold start mode.</p> <p>Another situation is that when no backup battery is connected, the GPS receiver will be in the cold start mode and there is no data stored in SRAM.</p> <p>Execute cold start of the test tool when first use. By this way can speed up position fix time.</p>
<p>Warm Start</p>	<p>In this scenario, the receiver was off less than one week but more than 2-hour time.</p> <p>The receiver knows its last position, time and almanac because it has a backup battery to keep current almanac, position and time stored in SRAM. In the warm start mode, the receiver can quickly acquire satellites and get a position fix faster than it does in the cold start mode.</p>
<p>Hot Start</p>	<p>In this scenario, the receiver was off less than 2-hour time. With the back up battery connected and the current almanac, position, time and ephemeris stored in SRAM, the receiver applies its last ephemeris data to calculate and get a position fix.</p>
<p>Reacquisition</p>	<p>In the reacquisition mode, the receiver takes time to lock on satellites if buildings or obstacles are blocking the signals for a short while.</p> <p>This is very common in urban areas, but please be noted that reacquisition time has nothing to do with the time-to-first-fix (TTFF).</p>

2. Technical Specifications

2.1 Electrical Characteristics

2.1.1 General

Frequency	L1, 1575.42 MHz
C/A code	1.023 MHz chip rate
Channels	20

2.1.2 Sensitivity

Tracking	-159dBm type
----------	--------------

2.1.3 Accuracy

Position	<15 meters CEP (95%) horizontal, SA off.
Velocity	0.1 meters/second
Time	±100 ns synchronized to UTC time

2.1.4 Datum

Default	WGS-84
Other	Support different datum by request

2.1.5 Acquisition Rate

Hot start	1 sec, average
Warm start	38 sec, average
Cold start	42 sec, average

2.1.6 Dynamic Conditions

Altitude	18,000 meters max
Velocity	515 meters/second (1000 knots) , max.
Acceleration	4g, max
Jerk	20 meters/second ³ , max.

2.1.7 Power

Input Power Voltage	VDC 3.2V-5V
Supply Current	Max. 80 mA

2.1.8 Serial Port

Electrical interface	LVTTTL and RS-232 interface
Protocol message	NMEA-0183, Version 3.0
Default NMEA	GGA, GSA, GSV, RMC 4800 baud rate, 8 bits data, 1 star , 1 stop, no parity. (Option baud rate: 9600, 19200, 38400)

2.2 Environmental Characteristics

Operating temperature range	-40 °C to +80 °C
Storage temperature range	-45 °C to +85 °C
Operating humidity range	5% to 90% non-condensing

2.3 Physical Characteristics

Dimension:	56mm x 53mm x 22.5mm (2.20"x2.08"x0.88")
Weight:	96g (3.38oz)
Interface standard connector:	PS/2 female connector
Interface optional connector:	USB cable or car charger for PDA

3. Hardware Interface

4 GM-R900 USB Driver Installation

Following is the brief indication of USB driver installation. We enclose a CD for detailed USB driver installation “GPS USB Driver Setup.pdf ” with products.

Step 1: Copy entire USB driver folders from CD to hard disk

Step 2: Double click the “ USB_CP2102_XP_2000 ” icon

Step 3: Press “OK” button

Step 4: Following the instructions

Step 5: Plug-in GPS to PC USB port

Step 6: Check enables COM port number

Step 7: To test GM-R900-R by testing tool

5. GPS Testing

The customers can test GM-R900 by testing tool.
